AIR

Automation Intelligence Report

Automation Intelligence Platform.
Converting automation execution into business decisions.

PROJECT **OOLTool**	ENVIRONMENT **PUAT**
BUILD **Playwright JSON**	EXECUTION DATE **6/29/2026, 8:55:09 PM**
FRAMEWORK **Playwright**	GENERATED BY **AIR Platform**
RELEASE RECOMMENDATION **GO**	QUALITY SCORE **99%**
BRANCH **Local**	COMMIT **Local**

AI **Release Reason**

- All executed tests passed.
- No blocker defects were detected.
- Pass rate is 100%, above the release threshold.
- Business health is 96%, supporting release confidence.

Generated

Release Decision

GO

Based on last execution

GO

All critical execution signals are healthy for release review.

Why Release?

- Critical flows passed
- No blocker defects
- Coverage above release threshold
- Business risk low

PAGE 02

Executive Summary

Can we release? Current build overview and quality snapshot.

Build Health: Excellent

Build health is excellent. 69 tests executed with 69 passing and no blocker defects found. Critical business journeys are healthy, business risk is low, and AIR recommends GO with 98% confidence.

BH Business Health Overview

Accessibility — OK — **100%** — Healthy - 6/6 passed

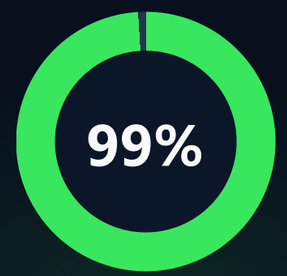

Authentication — OK — **100%** — Healthy - 25/25 passed

Billing — OK — **100%** — Healthy - 5/5 passed

Password — OK — **100%** — Healthy - 14/14 passed

Profile — OK — **100%** — Healthy - 5/5 passed

Signup — OK — **100%** — Healthy - 14/14 passed

GO

Build can proceed with monitoring.

Why Release?

- Critical flows passed
- No blocker defects
- Coverage above release threshold
- Business risk low

PAGE 03

Business Journey

Live Data

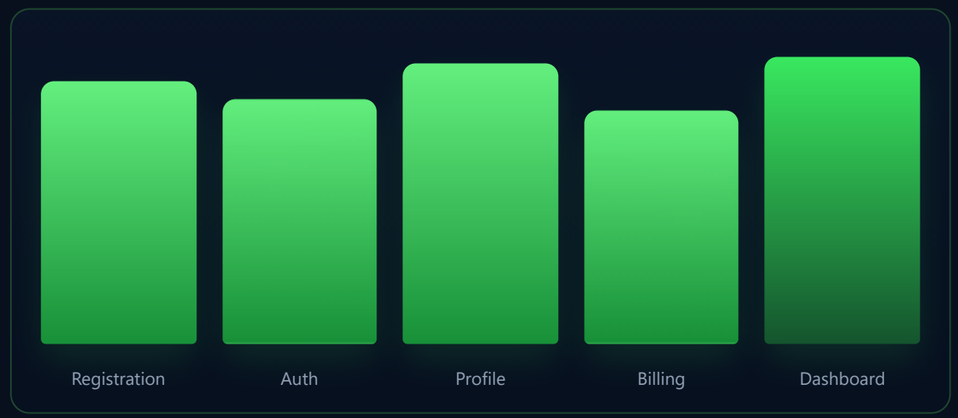

Are core flows healthy from signup to dashboard?

Core Flow Health

NA **Registration** 60% -> OK **Authentication** 100% -> OK **Profile Setup** 100% -> OK **Risk Profile** 100% -> NA **Compliance** 60% -> OK **Subscription** 100%

-> OK **Payment** 100% -> NA **Dashboard** 60%

Journey Trend

Answer

Core flows are healthy in the current execution.

Email-link and payment-provider dependent scenarios remain controlled flows and should be reported separately when run.

PAGE 04

Product Health

Which modules are healthy, which need attention, and what should QA do next?

Evidence Rule

Every release-impacting failure should link to screenshots, videos, traces, or raw execution evidence. Placeholder cards remain visible in demo mode so the dashboard layout stays client-ready.

PAGE 08

AI Quality Insight

What should we do next?

AI Why AIR Recommends GO

AIR recommends GO because the current execution has strong pass stability, no blocker failures, healthy business journeys, and enough regression confidence for release monitoring.

ESTIMATED RELEASE RISK

LOW

- All executed tests passed.
- No blocker defects were detected.
- Pass rate is 100%, above the release threshold.
- Business health is 96%, supporting release confidence.

QA Decision Signals

RELEASE	CONFIDENCE	PASS RATE	FAILURES
GO	98%	100%	0

Action Checklist

- Keep release monitoring enabled after deployment.
- Link every failed or warning signal to screenshot, video, trace, or raw Playwright evidence.
- Use module health cards to decide which QA area should receive the next automation investment.

P1 Priority Recommendations

Priority 1

Increase API validation

Add API-level checks for billing, authentication, signup, and password flows so AIR can separate UI issues from backend failures.

Priority 2

Increase DB validation

Add database validation for account status, subscription state, reset tokens, login lockout, and payment records.

Priority 3

Expand MFA and security coverage

Add negative MFA, session expiry, protected-route, unlock-account, and reset-password expiry scenarios.

Next QA Focus

Move from UI-only confidence to full quality intelligence by adding API, DB, MFA, and session-security validations.

AIR Roadmap

Phase 1 remains Playwright execution intelligence. API, database, security, performance, trend analysis, and AI recommendations stay architecture-ready and will become dynamic as those data sources are connected.
