AIR

Automation Intelligence Report

Automation Intelligence Platform.
Converting automation execution into business decisions.

PROJECT **OOLTool**	ENVIRONMENT **PUAT**
BUILD **Playwright JSON**	EXECUTION DATE **6/29/2026, 3:29:43 PM**
FRAMEWORK **Playwright**	GENERATED BY **AIR Platform**
RELEASE RECOMMENDATION **GO**	QUALITY SCORE **99%**
BRANCH **Local**	COMMIT **Local**

GO

All critical execution signals are healthy for release review.

AI **Release Reason**

- All executed tests passed.
- No blocker defects were detected.
- Pass rate is 100%, above the release threshold.
- Business health is 96%, supporting release confidence.

GO

Based on last execution

Why Release?

- Critical flows passed
- No blocker defects
- Coverage above release threshold
- Business risk low

PAGE 02

Executive Summary

Can we release? Current build overview and quality snapshot.

Build Health: Excellent

Build health is excellent. 69 tests executed with 69 passing and no blocker defects found. Critical business journeys are healthy, business risk is low, and AIR recommends GO with 98% confidence.

Journey Trend

Answer

Core flows are healthy in the current execution.

Email-link and payment-provider dependent scenarios remain controlled flows and should be reported separately when run.

AI Quality Insight

Execution Recommendation

What should we do next?

AI Why AIR Recommends GO

Next QA Focus

AIR Roadmap

GO

- All executed tests passed.
- No blocker defects were detected.
- Pass rate is 100%, above the release threshold.
- Business health is 96%, supporting release confidence.

Expand controlled flows, API validation, and database validation coverage.

Phase 1 remains Playwright execution intelligence. API, database, security, performance, trend analysis, and AI recommendations stay architecture-ready but not implemented as fake data.
